

Quick Start Checklist

✓ 5-Minute Setup (Do These in Order)

1. Download Your Site

- Click “Files” icon in Abacus AI (top right)
- Download the `musicofthe70s` folder
- Extract ZIP to your computer

2. Create GitHub Account & Repo

- Sign up: <https://github.com/signup>
- Create new repository: `musicofthe70s` (public)
- Don’t add README

3. Push to GitHub

Easiest method: Download GitHub Desktop

- <https://desktop.github.com/>
- Sign in → Add Local Repository → Select your folder
- Click “Publish repository”

OR use command line:

```
cd /path/to/musicofthe70s
git add .
git commit -m "Initial commit"
git remote add origin https://github.com/YOUR_USERNAME/musicofthe70s.git
git branch -M main
git push -u origin main
```

(Need a Personal Access Token, not password: <https://github.com/settings/tokens>)

4. Deploy to Cloudflare Pages

- Sign up: <https://dash.cloudflare.com/sign-up>
- Go to “Workers & Pages” → “Create” → “Pages” → “Connect to Git”
- Connect GitHub → Select `musicofthe70s` repo
- Build settings: Framework = None, Build command = empty, Output = `/`
- Click “Save and Deploy”
- **Your site is live at:** <https://musicofthe70s.pages.dev>

5. Buy & Connect Domain

Option A - Cloudflare (recommended, ~\$9/year):

- In Cloudflare: “Domain Registration” → Search `musicofthe70s.net`
- Purchase domain
- Go to “Workers & Pages” → Your project → “Custom domains”
- Add `musicofthe70s.net` (auto-configures DNS)
- Add `www.musicofthe70s.net`

Option B - Namecheap (~\$12/year):

- Buy at <https://namecheap.com>
 - In Namecheap: Domain List → Manage → Nameservers → Custom DNS
 - In Cloudflare: “Websites” → “Add site” → Enter your domain
 - Copy Cloudflare’s 2 nameservers to Namecheap
 - Wait 1-24 hours for propagation
 - In Cloudflare: “Workers & Pages” → Custom domains → Add your domain
-

What You Get

- **Live site:** `https://musicofthe70s.net` (after domain connects)
 - **Free hosting:** 100,000 requests/month
 - **Auto-deploy:** Every GitHub push updates the site in ~1 minute
 - **HTTPS:** Automatic SSL certificate
 - **CDN:** Global fast loading
-

Making Updates Later

1. Edit files on your computer
 2. **GitHub Desktop:** Commit + Push
OR Command Line: `git add . && git commit -m "Update" && git push`
 3. Cloudflare auto-deploys in ~60 seconds
-

Get Help

Full detailed guide: See `DEPLOYMENT_GUIDE.md` (or the PDF/Word versions)

Total Time: 15-20 minutes (plus domain propagation wait)

Total Cost: ~\$9-15/year (just the domain)
